IMPLANT SAFE
NO PAIN
NO COMPRESSION  15 minutes

DID YOU KNOW...
YOU CAN DO MORE TO PROTECT YOURSELF FROM BREAST CANCER WITH A POWERFUL ULTRASOUND SCREENING?

The power of an ultrasound can increase detection from approx. 48% to 97% in dense breasts.

.....

..... **capable of detecting cancers that *cannot be found* by**

mammography and physical exams. Sometimes mammograms and physical exams just aren't enough, particularly in women with dense breasts.

Breast Ultrasound

Painless, No Compression, No Radiation, Implant Safe, Radiologist Read, No Prescription Required, takes 15 - 20 minutes on average and is Critical for Women with Dense Breasts.

Dense Breasts Tissue

Approximately half the women in the United States have dense breast tissue. On a mammogram, dense tissue appears white and cancerous tumors also appear white making it nearly impossible to "see" the tumor. It's like trying to finding a snowball in a snowstorm.

Early Detection is Everything!

Studies confirm that Mammography misses every other cancer in women with dense breasts. Good breast health requires you to participate in regular physician guided exams, self-breast examination, annual Mammograms, Ultrasound or breast MRI for a complete healthy woman regimen.

Top Expertise

To insure the highest quality possible, all tests are read by a Board-Certified Radiologist. HerScan Sonographers are Registered RDMS, and are highly experienced breast specialists.

Latest Technology

Powerful ultrasound technology can see breast abnormalities that cannot be seen by mammography or by physical exam. Ultrasound sees all the way to the chest wall.

Convenient Easy Access

Our mobile medical teams set up at a variety of venues such as resorts, spas and community centers. You can easily register online at HerScan.com/register

Age Recommendation

Because ultrasound sees very well through dense breast tissue, women can get scanned early, especially when they have a history of breast cancer in thier family. Mammograms typically begin at age 45.

Affordable

Screening includes a scan of both breasts including the axilla (underarm area), the Radiologist reading fee, and U.S. postage to mail results direct to you -\$195 in most US states, except California \$235. Payment is due at the time of service. We accept major credit/debit cards and cash.

Insurance & Prescription

No prescription is required. At this time, HerScan does not accept Medicare, Medicaid or any third-party insurance. A receipt is provided.

Preparation & Procedure

The day of the health event please dress comfortably.

- Upon arriving to the health event you will be asked to fill out a brief medical history.
- Our female medical sonographer will provide you with a paper drape.
- An ultrasound probe with warm gel will be used to begin screening both breast, axilla (armpit) area.
- After the completion of your Screening test your test will be read by our board-certified radiologist.
- The results of your test will be mailed to you via US mail in 12-14 business days.
- Educational materials are provided at all health events.
